

The U.S. military is no longer based on a Cold War self-sufficient model. Today's armed forces are a third smaller than they were during the Cold War, and yet are expected to do as much if not more than they did during those years. As a result, a transformation is occurring in the way the U.S. government expects the military to conduct operationsâ€”with much of that transformation contingent on the use of contractors to deliver support to the armed forces during military campaigns and afterwards. *Contractors and War* explains the reasons behind this transformation and evaluates how the private sector will shape and be shaped by future operations. The authors are drawn from a range of policy, legislative, military, legal, and academic backgrounds. They lay out the philosophical arguments supporting the use of contractors in combat and stabilization operations and present a spectrum of arguments that support and criticize emergent private sector roles. The book provides fresh policy guidance to those who will research, direct, and carry out future deployments.
